Naeem Eltaief

Technical Mobile Team Lead — Mobile Engineering · Fintech & Payments

Tripoli, Libya +218 91 296 5097 naeem.eltaief@me.com linkedin.com/in/naeemeltaief github.com/naeemeltaief

Mobile engineer with 5+ years shipping production applications across fintech, government and logistics — now leading a technical team. Specialized in secure payment experiences: card digitization and tokenization, HCE contactless payments over NFC, and native Android/iOS payment SDK integration, delivered on Flutter and native codebases built with clean architecture. Leading a product end to end: architecture, delivery, code review and mentoring.

EXPERIENCE

Technical Mobile Team Lead · WASL Global — Financial Technology Jun 2026 — Present · Full Time

- Lead the mobile engineering team across Flutter, Android and iOS, owning technical direction, sprint planning and release schedules for the company's mobile applications.
- Remain hands-on as lead mobile developer, building the most security-critical payment features: card tokenization, HCE contactless over NFC and native payment SDK integration.
- Define the mobile architecture standard (clean architecture, BLoC, dependency injection) and apply it through code review and shared internal Flutter packages.
- Own the mobile release process: CI/CD pipelines, App Store and Google Play submissions, staged rollouts and production crash monitoring.
- Translate payment-scheme and security requirements into mobile technical specs, working directly with product, backend, design and card-scheme counterparts.
- Mentor mobile developers on Flutter, native platform APIs and secure coding practice; run onboarding and technical interviews.

Mobile Application Developer · Masarat Fintech Oct 2024 — Sep 2026 · Full time

- Delivered card digitisation for a national card portfolio: enrolled physical cards into secure digital tokens and enabled contactless payment at POS through Host Card Emulation (HCE) over NFC via a native Android SDK.
- Built Mastercard SCA tokenization for international cards on both iOS and Android using the scheme's native SDKs — enrolment from physical card to token, plus payment authorisation by push notification and QR code.
- Implemented the security-sensitive layers of the mobile banking and payment flow: device binding, cardholder verification, encrypted local storage of token references and secure API integration.
- Bridged native payment SDKs into Flutter through platform channels, keeping one shared product codebase across both platforms.

Mobile Application Developer · Ajeer Sep 2025 — Nov 2025 · Part time

- Developed customer-facing Flutter features for an on-demand services platform, covering booking flows, notifications and REST API integration.

Frontend Developer · QANA May 2022 — Oct 2024 · Contract

- Built and maintained web front-ends and content platforms for client projects, translating design files into responsive, accessible interfaces.
- Worked across a long-running client portfolio, handling releases, fixes and incremental feature delivery.

Mobile Application Developer · Dojoon Sep 2023 — Aug 2024 · Full time

- Delivered Flutter applications for public-sector clients, including the 1415 emergency contact centre and municipal employee services.
- Introduced reusable architecture and shared packages that shortened delivery time on subsequent projects.

Software Developer · ARD for Computers & Technology Dec 2022 — Aug 2023 · Full time

- Developed and supported business software and internal tools, working across mobile and web layers with REST APIs.

SELECTED PROJECTS

Digital Card Tokenization — HCE contactless payments
Digitises physical bank cards into secure tokens held on the device and lets customers tap to pay at any contactless terminal using Host Card Emulation over NFC, integrated through a native Android SDK. Covered the full lifecycle: enrolment, token provisioning, cardholder verification and token suspension or deletion.

Mastercard SCA Tokenization
Enrols international Mastercard cards from physical plastic into scheme-issued tokens on iOS and Android via Mastercard's native SDKs, with strong customer authentication and payment approval through push notification and QR code.

Refd — Schools Management Application
Connects students, parents and schools in one experience: academic progress tracking, access to learning materials, school notifications and direct communication between families and staff.

Local Contact Center 1415
National emergency contact application for a Libyan government ministry, connecting citizens to emergency services and speeding response to medical, fire and security incidents.

Baldety — municipal HR
Gives municipal employees of the Ministry of Local Government quick access to their personal records, ministry communications and feedback submission.

Environmental Services App
Map-based platform for viewing commercial activities, landfills and other sites managed by the Environmental Department of the Ministry of Local Government.

Roya Shipping
Sea-freight tracking application: authorised users create shipments, record consignment details and receive status notifications through the shipping lifecycle.

Dynamic Form Builder — open-source Flutter package
Published package that generates complete forms from a list of field definitions, with validation and multiple field types — used to remove repetitive form code from production apps.

SKILLS

Languages	Dart, Kotlin, Swift, JavaScript, SQL
Frameworks	Flutter, Vue.js, Next.js
Mobile	Flutter, native Android SDK, native iOS SDK, platform channels, NFC / HCE, push notifications
Payments	Card tokenization, card digitisation, contactless payments, Mastercard SCA tokenization, QR payments, device binding, secure storage
Architecture	Clean architecture, MVVM, BLoC state management, dependency injection, OOP
Platform & tools	RESTful APIs, Git, CI/CD, cloud services, WordPress, Microsoft Office
Leadership	Team leadership, code review, mentoring, technical specification, stakeholder communication
Languages spoken	Arabic (native), English (professional)

EDUCATION & CERTIFICATION

Bachelor's degree, Information Technology — Mobile Computing 2016 — 2023
University of Tripoli

International Computer Driving Licence (ICDL)
